KBC HACKATHON PITCH WORKFLOW

From our code and the assignment to a finished deck

Claude Code keeps two pitch files in sync with our repo. Claude turns them into the deck, in our KBC design, sized to the pitch length.

Bas Vannieuwenhuyse
Jure Ankenaert
Lennart Steen
Daniel Korobitsin

1 How the pieces connect

INPUTS IN OUR REPO

What we write and build

`assignment/`
Transcript + organiser files. Primary source.

`discussion/`
Our ideas. Lowest priority.

`frontend/` + other code
The prototype itself.

`pitch_assets/`
Screenshots, demo video (≤ 20 MB).

→

CLAUDE CODE

Keeps the pitch files true

CLAUDE.md
The rules: no invented numbers, evidence for every fact.

Stop hook on main
Assignment or code changed? Claude updates the pitch files before it finishes.

Feature branches
Leave the pitch files alone, so pull requests don't conflict.

→

PRESENTATION_WORKFLOW/

Two files, two jobs

pitch_story.md, the why
Rubric, pitch length, persona, problem, impact, ask.
[confirmed] [draft] [missing]

pitch_facts.md, what we built
Features, demo path, real vs mocked, measured numbers. Each line cites a file.

→

CLAUDE APP

Builds and updates the deck

The hackathon pitch skill
Reads both files, checks one against the other, then builds the slides.

DESIGN.md + slide library
Same colours as our app, 25 ready slides.

Live deck in Claude Slides
Present from the page; export to PPTX or PDF.

2 What to say

SAY	WHERE	WHAT HAPPENS
"update pitch story"	CODE	Fills the story from the assignment and our discussion.
"update pitch facts"	CODE	Regenerates the facts from the repo.
"update pitch files"	CODE	Both, then the pitch check.
"pitch check"	CODE	Lists conflicts, gaps and demo risks.
"update our presentation"	APP	Changes only the slides whose inputs changed.
"we have a demo video"	APP	Puts the clip on the demo slide.

3 Rules that keep it honest

Story and facts stay separate. Code gives facts; the team owns the story.

Nothing invented. Unknowns stay `[placeholders]`; estimates are labelled.

Conflicts never reach a slide. A simulated Kate becomes "ready for Kate".

[confirmed] is never overwritten. Only the team sets it.

One design. DESIGN.md colours, no KBC logo, AI answers labelled.

4 The deck adapts to the pitch length

Set in pitch_story.md. The demo gets 40 to 60 % of the time.

2 min
5 slides: cover, problem, demo, impact and close

3 min
7 slides, adding solution and how it works

5 min
10 slides + 1 module chosen from the rubric

7 min or more
The full story with Kate, PEARL+, team and 2 modules

5 What every update gives you

Slide order with timings, within 90 % of the time slot.

Rubric coverage: each criterion mapped to its slides.

What's still to fill, and who fills it.

Answers to the 8 questions juries ask most.

Plain, human text: short headlines, no dashes, no buzzwords.

6 On the day

KICKOFF
Paste the assignment into assignment/, say "update pitch story", build the first deck.

MIDWAY
Merge to main; pitch files update. Say "update our presentation".

LAST 3 HOURS
Stop coding about 2 hours before. Record the backup clip, take screenshots.

ON STAGE
Present from Claude Slides. One speaker, one demo driver. Submit early.
